No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       useful as probes or amplification primers in the detection, quantification or isolation of gene sequences or transcripts, for recombinant expression of hOB-BP2h polypeptides, as immunogens in the preparation and screening of antibodies, and in sense or antisense suppression of one or more hOB-BP2h genes or nucleic acids, host cell or tissue in vivo or in vitro. Antigenic epitope-bearing peptides and polypeptides are useful for raising or screening antibodies that specifically binds to the hOB-BP2h polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence is a human obesity protein binding protein-2 homologue (hOB-Bp2h) of the invention. The hOB-Bp2h nucleic acids and polypeptides may be used for the manifacture of a medicament for the treatment of obesity and/or obesity-related disorders. The hOB-Bp2h nucleic acids are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              treating
                                                                                               Sialic acid-binding Ig-related lectin, Siglec-BMS-L3-995-3.

CC represent potential markers for screening, diagnosis, prognosis, cc follow-up assays, and imaging methods. (I) is useful as a target for cc drugs which inhibit inflammation, tissue damage and remodeling in cc asthma, and inflammatory diseases such as allergic rhinitts, conjunctivitis, crohn's disease, psoriasis, rheumatoid arthritis, conjunctivitis, etc. (I) is also useful for monitoring the course of conjunctivitis, etc. (I) is also useful for monitoring the course of cdisease or disorders, and for identifying agents that bind with and/or modulate the biological activity of SIGLEC-BMS proteins. The nucleic acid conjunctivities (II) encoding (I) are useful in diagnosis and/or prognosis methods, and to detect the presence and/or amount of SIGLEC-BMS (II) are useful as nucleic acid probes are useful for screening genomic (II) are useful as nucleic acid probes are useful for screening genomic clibrary to isolate a genomic clone of SIGLEC gene. SIGLEC-BMS gene copy cumber is determined for detecting diseases or disorders associated with SIGLEC-BMS transcripts or proteins. The SIGLEC-BMS antibodies are also cused to detect, sort or isolate cells expressing SIGLEC-BMS proteins cand in diagnostic imaging technology. AAU87074-AAU87089 represent contains and signostic imaging technology. AAU87074-AAU87089 represent

cc are useful for treating immune system diseases such as asthma, leukaemia cor other allergic or inflammatory diseases. Extracellular domains of (I) crepresent potential markers for screening, diagnosis, prognosis, cc follow-up assays, and inaging methods. (I) is useful as a target for cc drugs which inhibit inflammation, tissue damage and remodeling in cc asthma, and inflammatory diseases such as allergic rhinitis, ccoming the course of cc osteoarthritis, ctc. (I) is also useful for monitoring the course of cc disease or disorders, and for identifying agents that bind with and/or cc modulate the biological activity of SIGLEC-BMS proteins. The nucleic acid cc molecules (II) encoding (I) are useful in diagnosis and/or prognosis cc methods, and to detect the presence and/or amount of SIGLEC-BMS conjunctivities sequences and/or SIGLEC-BMS proteins in a biological sample. (II) are useful as nucleic acid probes are useful for screening genomic clibrary to isolate a genomic clone of SIGLEC-BMS antibodies are also used to detect, sort or isolate calls expressing SIGLEC-BMS proteins coming the conjunctivity of siglec-BMS antibodies are also cused to detect, sort or isolate calls expressing SIGLEC-BMS proteins cand in diagnostic imaging technology. New secreted and transmembrane polypeptides and their polynucleotides, useful for treating blood coagulation disorders, cancers and cellular adhesion disorders -  $\frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{$ 

The present invention describes secreted and transmembrane polypeptides and their polynucleotides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies. AAZ3891 to AAZ34338, and AAY41685 to AAY41774 represent polynucleotide and polypeptide sequence given in the exemplification of the present

The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bloactive molecules to cells and for modulating blological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bloactive molecules to cells. AAC78600 to AAC78987 represent PCR primers and probes used in the isolation of the PRO polynucleotide sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ferrara

Sequences AAU29024-AAU29328 represent PRO polypeptides of the invention. CC The PRO polypeptides and their associated nucleic acids can be used to detect the presence of a tumour in a mammal by comparing the level of CC expression of a PRO polypeptide in a test sample of cells from the animal CC and a control sample of normal cells, whereby a higher level of CC expression in the test sample indicates the presence of a tumour in the CC mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats CC and rabbits but are preferably human. The polypeptides can be used to CC stimulate tumour necrosis factor (TNF) alpha release from human blood, CC when contacted with it. A specific polypeptide can be used to stimulate tumour or differentiation of chondrocyte cells. The PRO CC proteins can be used to determine the presence of tumours and also CC susceptibility to tumour development, particularly adrenal, lung, colon, CC breast, prostate, rectal, cervical, or liver tumours, in mammalian CC subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders.

New secreted and transmembrane PRO polypeptides and nucleic acids, useful in gene therapy, in chromosome and gene mapping, as chromosomarkers, in tissue typing, and in chromosome identification chromosome

Claim 11; Fig 118; 706pp; English.

The invention discloses human nucleic acids encoding secreted and transmembrane (PRO) polypeptides. Also disclosed is an antibody that specifically binds to the PRO polypeptide, a method for stimulating trelease of tumour necrosis factor alpha (TNF-alpha) from human blood contacting the blood a PRO polypeptide, a method for stimulating the the d by

wound healing;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            proliferation or differentiation of chondrocyte cells by contacting the cells with a PRO polypeptide, a method for detecting the presence of a tumour in a mammal and an oligonuclectide probe derived from any of the PRO nucleotide sequences. The nucleotide sequences are useful as probes, in chromosome and gene mapping, in generating antisense RNA and DNA, in preparing PRO polypeptides by recombinant techniques and in gene therapy (e.g. for replacement of defective gene). The PRO polypeptides are useful as molecular weight markers for protein electrophoresis purposes, for chromosome identification, as chromosome markers, as therapeutic agents, for stimulating the release of TNF-alpha from human blood, for stimulating the presence of a tumour. The PRO polypeptides and nucleic acids may also be used diagnostically for tissue typing. The sequences presented in ABU67406-ABU67710 are the PRO polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

polypeptides, and the polynucleotide sequences encoding them. The CC PRO polypeptides are useful for detecting other PRO polypeptides, for CC polypeptides are useful for detecting other PRO polypeptides, for CC linking bloactive molecules to cells expressing PRO polypeptides, CC for modulating biological activities of cells expressing PRO polypeptides, CC polypeptides, and for for identifying agonists or antagonists. The CC polypeptides are useful for the cell. The PRO polypeptides are useful for treating immune disorders, diabetes or hyper- or hypo-insulinaemia, CC cardiac insufficiency nervous system disorders, kidney disorders, CC thousand cartilage disorders or arthritis, tumours, and wound healing. CC The polypucted sequences encoding PRO polypeptides are useful as hybridisation probes, in chromosome and gene mapping, in the generation CC contains transgenic animals or knockout animals, for the genetic analysis of individuals with genetic disorders, and in gene therapy. ABU61071-ABU61164 represent the human PRO polypeptides of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       27-MAR-1998

CD22 homolog/B lymphocyte-restricted adhesion molecule - mouse
C;Species: Mus musculus (house mouse)
C;Date: 18-Jun-1993 #sequence_revision 18-Nov-1994 #text_change 11-Apr-1995
C;Accession: A46512
R;Torres, R.M.; Llaw, C.L.; Santos-Argumedo, L.; Kirkham, P.A.; Grabstein, K.; Parkhouse, J. Immunol. 149, 2641-2649, 1992
A;Title: Identification and characterization of the murine homologue of CD22, a B lymphod A;Reference number: A46512; MUID:93017867; PMID:1401903
A;Accession: A46512
A;Status: preliminary; not compared with conceptual translation
A;Residues: 1-868 <TOR>
A;Residues: 1-868 <TOR>
A;Experimental source: B cell lymphoma 38C13
A;Note: sequence extracted from NCBI backbone (NCBIP:116156)

RESULT 13
A32164
A32164
blilary glycoprotein 1 precursor, splice form a - human
blilary glycoprotein 1 precursor, splice form a - human
N;Alternate names: transmembrane carcinoembryonic antigen 1 (TM1-CEA); transmembrane
N;Contains: biliary glycoprotein 1, splice form b; biliary glycoprotein 1, splice for
C;Species: Homo sapiens (man)
C;Date: 20-Apr-2000 #sequence\_revision 20-Apr-2000 #text\_change 20-Apr-2000
C;Accession: A32164; A30127; B30127; A48078; S45664; S65939; A30847; G44476
R;Hinoda, Y.; Neumaier, M.; Hefta, S.A.; Drzeniek, Z.; Wagener, C.; Shively, L.; Heft
Proc. Natl. Acad. Sci. U.S.A. 86, 1668, 1989
A;Reference number: A32164 R;Barnett, T.R.; Kretschmer, A.; Austen, D.A.; Goebel, S.J.; Hart, J.T.; Elting, J.J. Cell Biol. 108, 267-276, 1989
A;Title: Carcinoembryonic antigens: alternative splicing accounts for the multiple mR A;Reference number: A92752; MUID:89139550; PMID:2537311
A;Accession: A30127 A; Molecule type: mRNA
A; Residues: 1-319, 'D', 417-526 <BAR2>
A; Cross-references: EMBL:X14831; NID:937199;
A; Experimental source: splice form b

C. - FUNCTION: Putative adhesion molecule that mediates sialic-acid conception with stalic acid recognition site may be masked by cis interactions with stalic acids on the same cell surface. In the immune response, may act as an inhibitory receptor cytoplasmic phosphatase(s) via their SH2 domain(s) that block molecules.

C. molecules.

SIMILARITY: BELONGS TO THE IMMUNOGLOBULIN SUPERFAMILY. SIGLEC (SIALIC ACID BINDING IG-LIKE LECTIN) SUBFAMILY.

SIMILARITY: Contains 1 immunoglobulin-like V-type domain.

SIMILARITY: Contains 3 immunoglobulin-like C2-type domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (eosinophils, monocytes and a natural killer cell subpopulation). Isoform 5 is found to be the most abundant isoform. Found in lymph node, lung, ovary and appendix. Isoform 1 is found at high levels and isoform 2 at lower levels in bone marrow, spleen and spinal chord. Isoform 2 is also found in brain. Isoform 4 is specifically found in natural killer cells.

DOMAIN: Contains an intracytoplasmic motif referred as immunoreceptor tyrosine-based inhibitor motif (ITIM). This motif is involved in downmodulation of cellular functions as the termination of the immune response. The phosphorylated ITIM motif pinds to the SH2 domain of PTPN6/SHP-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            IsoId=Wyu-...
